

 UNIVERSITY OF TRENTO

ICT Innovation – Spring 2018
MSc in Computer Science and MEng Telecom. Engineering
EIT Masters ITA, S&P, SDE, DMT
MA In Management of Innovation

Lecture 06 – Concept Development - Needs
Prof. Fabio Massacci

 UNIVERSITY OF TRENTO

PD&D Process: Concept Development

- **Eliminate**
 - Concepts that look unpromising (business-wise)
 - Concepts that are unwieldy to design

Target Specs
Based on customer needs and benchmarking

Final Specs
Based on selected concept, feasibility, models, testing, and trade-offs

08/03/18 Fabio Massacci - ICT Innovation ▶ 2

Customer Needs & Product Requirements

 UNIVERSITY OF TRENTO

- **Define the Scope**
 - Mission Statement
- **Gather Raw Data**
 - Interviews
 - Focus Groups
 - Observation
- **Interpret Raw Data**
 - Need Statements
- **Organize Requirements**
 - Hierarchy
 - Quantified Needs
- **Establish Importance**
 - Surveys
- **Reflect on the Process**
 - Continuous Improvement
 - Multiple perspectives
 - Look for “Evidence”

08/03/18 Fabio Massacci - ICT Innovation ▶ 3

Example: Cordless Screwdrivers

 UNIVERSITY OF TRENTO

08/03/18 Fabio Massacci - ICT Innovation ▶ 4

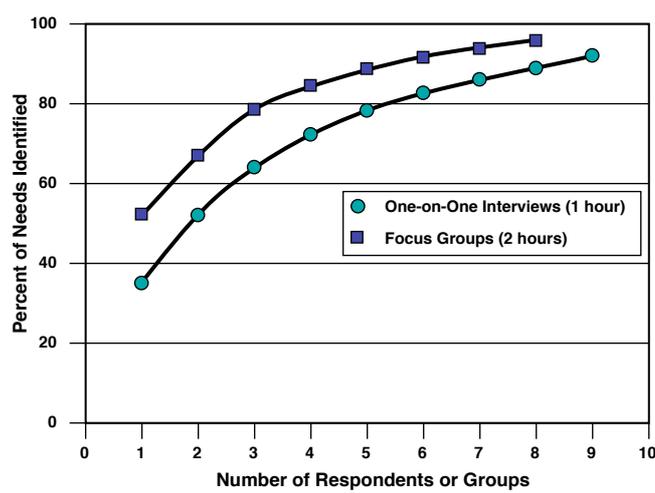

UNIVERSITY OF TRENTO

Mission Statement: Screwdriver Project

- **Product Description**
 - A hand-held, power-assisted device for installing threaded fasteners
- **Key Business Goals**
 - Product introduced in 4th Q of 2000
 - 50% gross margin
 - 10% share of cordless screwdriver market by 2004
- **Primary Market**
 - Do-it-yourself consumer
- **Secondary Markets**
 - Casual consumer
 - Light-duty professional
- **Assumptions**
 - Hand-held
 - Power assisted
 - Rechargeable battery technology
- **Stakeholders**
 - User
 - Retailer
 - Sales force
 - Service center
 - Production
 - Legal department

08/03/18

▶ 5

How Many Customers?

Number of Respondents or Groups	One-on-One Interviews (1 hour)	Focus Groups (2 hours)
1	35	52
2	52	68
3	65	78
4	72	84
5	78	88
6	82	91
7	85	93
8	88	94
9	90	95

From: Griffin, Abbie and John R. Hauser. "The Voice of the Customer", *Marketing Science*. vol. 12, no. 1, Winter 1993.

08/03/18
Fabio Massacci - ICT Innovation
▶ 6

 UNIVERSITY OF TRENTO

Caveats

- **What to capture?**
 - Capture “What, Not How”.
 - Meet customers in the use environment.
 - Collect visual, verbal, and textual data.
 - Props will stimulate customer responses
- **How to Capture?**
 - Interviews are more efficient than focus groups.
 - Interview all stakeholders and lead users.
 - Survey to quantify tradeoffs
- **How to structure?**
 - Develop an organized list of need statements.
 - Look for latent needs.
 - Customers may prioritize “wrong” thing → Use control questions or independent evidence

08/03/18
Fabio Massacci - ICT Innovation

 UNIVERSITY OF TRENTO

Writing Customer Needs

Guideline	Customer Statement	Need Statement 1	Need Statement 2
Specify What, Not How	“Why don’t you put protective shields around the battery contacts?”	Prevent damage to the battery and eventually to battery itself, battery never to fall out, safe to handle with hands, prevent electric shock	Battery contacts to be protected, put protective shields around battery contacts
Specificity	“I drop my screwdriver all the time.”	must be operational after falling, easy hold in hand in all conditions, prevent scratching of smooth polished surfaces	Physical form to fit into a pocket, outer casing of SD fall-resistant, bumpers, rope
Positive Not Negative	“It doesn’t matter if it’s raining, I still need to work outside on Saturdays.”	Device resistant to getting wet, Has to work in any kind of weather	Waterproof
Attribute of the Product	“I’d like to charge my battery from my cigarette lighter.”	Include into the product a battery that can be charged from lighter	SD should be able to recharge with different methods, recharge quickly
Avoid “Must” and “Should”	“I hate it when I don’t know how much juice is left in the batteries of my cordless tools.”	Battery level has to be seen by the user, liquid indicator	

08/03/18
Fabio Massacci - ICT Innovation

UNIVERSITY OF TRENTO

Writing Customer Needs (II)

Guideline	Customer Statement	Need Statement- <u>Wrong</u>	Need Statement- <u>Right</u>
Specify What, Not How	"Why don't you put protective shields around the battery contacts?"	The screwdriver battery contacts are covered by a plastic sliding door.	The screwdriver battery is protected from accidental shorting.
Specificity	"I drop my screwdriver all the time."	The screwdriver is rugged.	The screwdriver operates normally after repeated dropping.
Positive Not Negative	"It doesn't matter if it's raining, I still need to work outside on Saturdays."	The screwdriver is not disabled by the rain.	The screwdriver operates normally in the rain.
Attribute of the Product	"I'd like to charge my battery from my cigarette lighter."	An automobile cigarette lighter adapter can charge the screwdriver battery.	The screwdriver battery can be charged from an automobile cigarette lighter.
Avoid "Must" and "Should"	"I hate it when I don't know how much juice is left in the batteries of my cordless tools."	The screwdriver should provide an indication of the energy level of the battery.	The screwdriver provides an indication of the energy level of the battery.

UNIVERSITY OF TRENTO

Requirements for a ScrewDriver (Book Exercise)

- maintains power for several hours of heavy use
- can drive screws into hardwood.
- drives sheet metal screws into metal ductwork.
- drives screws faster than by hand.
- retains the screw before it is driven
- can be used to create a pilot hole
- can turn philips, torx, socket, and hex head screws
- can turn many sizes of screws
- can be maneuvered in tight areas.
- can access screws at the end of deep, narrow holes
- can be used to remove grease and dirt from screws.
- allows the user to work with painted screws.
- is comfortable when the user pushes on it
- is comfortable when the user resists twisting
- is balanced in the user's hand.
- is equally easy to use in right or left hands.
- is warm to touch in cold weather.
- remains comfortable when left in the sun.
- user can easily push on the SD
- user can easily resist the SD twisting
- SD can be locked "on."
- SD speed can be controlled by the user while turning a screw
- SD remains aligned with the screw head without slipping
- user can easily see where the screw is
- SD is easily reversible.

- SD does not strip screw heads
- SD is easy to turn on
- SD prevents inadvertent switching off
- user can set the maximum torque of the SD.
- SD provides ready access to bits or accessories
- SD can be attached to the user for temporary storage.
- SD is easy to recharge.
- SD can be used while recharging.
- SD recharges quickly
- SD batteries are ready to use when new.
- user can apply torque manually to the SD to drive a screw
- tip survives heavy use
- can be hammered.
- can be dropped from a ladder without damage
- fits in a toolbox easily.
- can be charged while in storage.
- resists corrosion when left outside or in damp places
- maintains its charge after long periods of storage.
- maintains its charge when wet.
- prevents damage to the screw head.
- prevents scratching of finished surfaces.
- can be used on electrical devices.
- does not cut the user's hands

Requirements for a ScrewDriver (Book Exercise)

- **The SD provides plenty of power to drive screws.**
 - maintains power for several hours of heavy use (*)
 - can drive screws into hardwood. (**)
 - drives sheet metal screws into metal ductwork.
 - drives screws faster than by hand (***)
- **The SD makes it easy to start a screw.**
 - retains the screw before it is driven. (*)
 - can be used to create a pilot hole. (**)
- **The SD works with a variety of screws.**
 - can turn philips, torx, socket, and hex head screws (**)
 - can turn many sizes of screws. (**)
- **The SD can access most screws.**
 - can be maneuvered in tight areas.
 - can access screws at the end of deep, narrow holes. (**)
- **The SD turns screws that are in poor condition.**
 - can be used to remove grease and dirt from screws.
 - allows the user to work with painted screws.
- **The SD feels good in the user's hand.**
 - is comfortable when the user pushes on it. (***)
 - is comfortable when the user resists twisting (***)
 - is balanced in the user's hand.
 - is equally easy to use in right or left hands (l).
 - weight is just right.
 - is warm to touch in cold weather.
 - remains comfortable when left in the sun.
- **The SD is easy to control while turning screws.**
 - user can easily push on the SD (***)
 - user can easily resist the SD twisting (***)
 - SD can be locked "on."
 - SD speed can be controlled by the user while turning a screw. (***)
 - SD remains aligned with the screw head without slipping. (*)
 - user can easily see where the screw is (**)
 - SD does not strip screw heads. (*)
 - SD is easily reversible. (*)
- **The SD is easy to set-up and use.**
 - SD is easy to turn on. (*)
 - SD prevents inadvertent switching off. (*)
 - user can set the maximum torque of the SD.
 - SD provides ready access to bits or accessories (**),
 - SD can be attached to the user for temporary storage.
- **The SD power is convenient.**
 - SD is easy to recharge.
 - SD can be used while recharging.
 - SD recharges quickly (***)
 - SD batteries are ready to use when new.
 - user can apply torque manually to the SD to drive a screw. (***)
- **The SD lasts a long time.**
 - tip survives heavy use. (**)
 - can be hammered.
 - can be dropped from a ladder without damage. (*)
- **The SD is easy to store.**
 - fits in a toolbox easily.
 - can be charged while in storage.
 - resists corrosion when left outside or in damp places
 - maintains its charge after long periods of storage.
 - maintains its charge when wet.
- **The SD prevents damage to the work.**
 - prevents damage to the screw head.
 - prevents scratching of finished surfaces.
- **The SD has a pleasant sound when in use.**
- **The SD looks like a professional quality tool.**
- **The SD is safe.**
 - can be used on electrical devices.
 - does not cut the user's hands (***)

▶ 15

Requirements for a ScrewDriver (sorted)

***** Priority**

- drives screws faster than by hand
- is comfortable when the user pushes on it
- is comfortable when the user resists twisting
- Speed controlled by user while turning a screw
- recharges quickly
- User can apply torque manually to SD to drive a screw.
- does not cut the user's hands

**** Priority**

- drive screws into hardwood
- turn philips, torx, socket, hex head screws
- turn many sizes of screws
- Tip survives heavy use
- access screws at the end of deep, narrow holes
- used to create a pilot hole
- remains aligned with head without slipping.
- user can easily see where the screw is
- does not strip screw heads
- provides ready access to bits or accessories

*** Priority**

- maintains power for several hours of use
- is easily reversible
- Retains the screw before it is driven
- is easy to turn on
- prevents inadvertent switching off
- is equally easy to use in right or left hands
- can be dropped from a ladder without damage

No Priority

- drives sheet metal screws into metal ductwork.
- can be maneuvered in tight areas.
- user can set the maximum torque of the SD.
- SD is easy to recharge.
- can be hammered.
- fits in a toolbox easily.
- Maintains charge after long periods of storage.
- Maintains charge when wet.
- prevents damage to the screw head.
- prevents scratching of finished surfaces.
- can be used on electrical devices.

UNIVERSITY OF TRENTO

Different tools with “close” functionality

- **A screwdriver set 15 pieces – \$18.37**

- **VS**
- **Cordless Drill + 15 pieces - \$89.9+5.99**

+

- **Cost is 5 times more!**

- **Key Features**
 - Lithium Ion Battery
 - 11 Position Clutch
 - LED work light
 - Compact and Lightweight
- **Benefits**
 - Always Ready. holds a charge up to 18 months
 - Helps to prevent stripping of screws
 - Illuminates project area
 - For getting into tight spaces
- **What's Included**
 - LDX120 20V MAX Lithium drill/driver
 - (1) LBX20 20V MAX Lithium Ion battery
 - (1) LCS20 charger
 - (1) Double ended bit
- **Uses**
 - Screwdriving though wood, metal, and plastic
- **Extra: buy screw tips**

UNIVERSITY OF TRENTO

Requirements for a ScrewDriver (from reality)

- *** **Priority**
 - drives screws faster than by hand**
 - is comfortable when the user pushes on it
 - is comfortable when the user resists twisting
 - Speed controlled by user while turning a screw
 - recharges quickly
 - User can apply torque manually to SD to drive a screw.
 - does not cut the user's hands
- ** **Priority**
 - drive screws into hardwood**
 - turn philips, torx, socket, hex head screws
 - turn many sizes of screws
 - Tip survives heavy use
 - access screws at the end of deep, narrow holes
 - used to create a pilot hole
 - remains aligned with head without slipping.
 - user can easily see where the screw is**
 - does not strip screw heads**
 - provides ready access to bits or accessories

- * **Priority**
 - maintains power for several hours of use
 - is easily reversible
 - Retains the screw before it is driven
 - is easy to turn on
 - prevents inadvertent switching off
 - is equally easy to use in right or left hands
 - can be dropped from a ladder without damage
- No Priority**
 - drives sheet metal screws into metal ductwork.**
 - can be maneuvered in tight areas.**
 - user can set the maximum torque of the SD.**
 - SD is easy to recharge.
 - can be hammered.
 - fits in a toolbox easily.
 - Maintains charge after long periods of storage.**
 - Maintains charge when wet.
 - prevents damage to the screw head.**
 - prevents scratching of finished surfaces.
 - can be used on electrical devices.

UNIVERSITY OF TRENTO

Requirements (contd)

- **“Customers” do not always state the correct requirements**
- **Never state the “obvious”, because it is indeed obvious (for them)**
 - “is easily reversible” has only (*) → should have (+infinity)
 - a screwdriver that is not reversible is just not sellable → because you screw and unscrew...
 - “user can set the maximum torque” of the SD has no star → should be (***)
 - You naturally apply different torques when screwing through wood or plaster
 - It is the second key feature of the product
- **Don’t mention true priorities**
 - “turn many sizes of screws” has only (**)
 - Would you pay 5 times the cost of a set of screwdrivers to be able to screw only one type of screw?
 - “Maintains charge after long periods of storage” has no star
 - First benefit of product...
- **Desire property of the new device as if it was old device**
 - “User can apply torque manually to SD to drive a screw” has (***)
 - Turning a screw with a heavy thing with an electric motor ain’t a good idea
 - “can be hammered”
 - Yes, great idea to hammer something with a motor, electronics, lots of turning parts, and a battery
- **Ask cool but impossible things**
 - “Maintains charge when wet”
 - Man, it’s an electrical device...
 - “Speed controlled by user while turning a screw” has (***)
 - One hand to hold the screwdriver, one hand to hold the pane or yourself on top of a ladder, a 3rd hand to change speed...

08/03/18
Fabio Massacci - ICT Innovation
▶ 19

UNIVERSITY OF TRENTO

The Product Specs Process

- **Set Target Specifications**
 - Based on customer needs and benchmarks
 - Develop “product” metrics for each need
 - Set ideal and acceptable values
- **Refine Specifications**
 - For selected concept(s)
 - Use both technical modeling and feasibility testing
 - Understand cost/needs/engineering trade-offs
- **Possibly Market of Goods**
 - Gross Margin may be different → different trade offs
 - $M=(P-C)/P$
 - **Manufacturer:**
 - Consumer Software (70-100%), Consumer Electronics (20-40%), Computers (15-50%)
 - **Retailers:**
 - Electronics (15-35%), Mail Orders (40-75%)

The "whole" product

08/03/18 Fabio Massacci - ICT Innovation ▶ 21

UNIVERSITY OF TRENTO

Detailed description: This slide features a green header with the text "The 'whole' product" and the University of Trento logo. The main image shows a full mountain bike, specifically a Specialized S-Works model, in a side profile. The bike is black with silver accents and has "SPECIALIZED" and "S-WORKS" branding on the frame. It includes a full suspension system, disc brakes, and knobby tires. At the bottom of the slide, there is a date "08/03/18", the name "Fabio Massacci - ICT Innovation", and a navigation arrow pointing to slide 21.

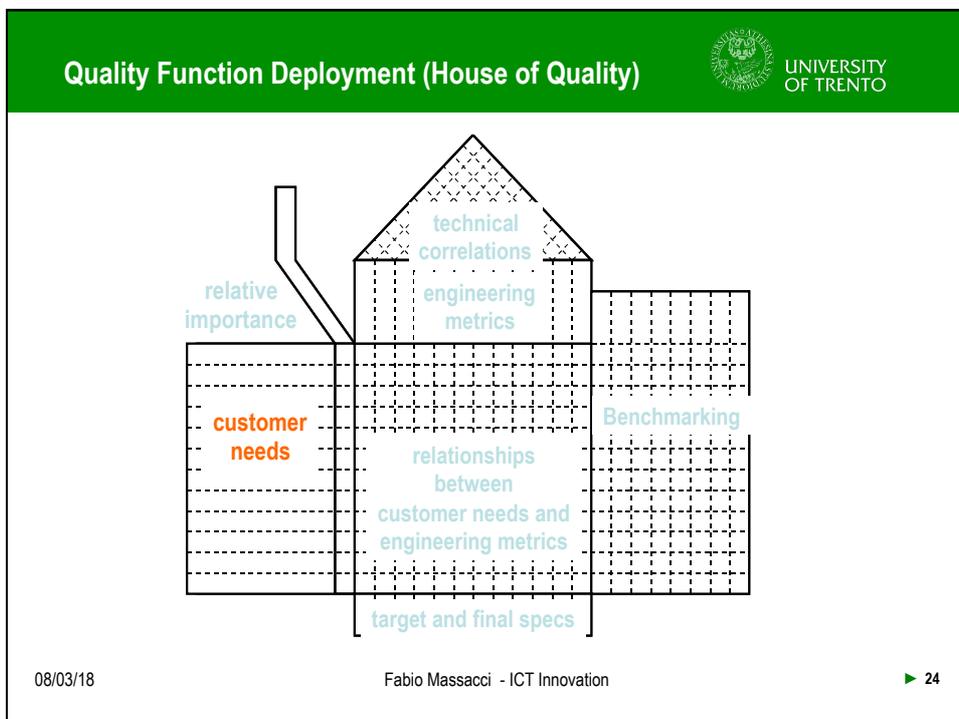

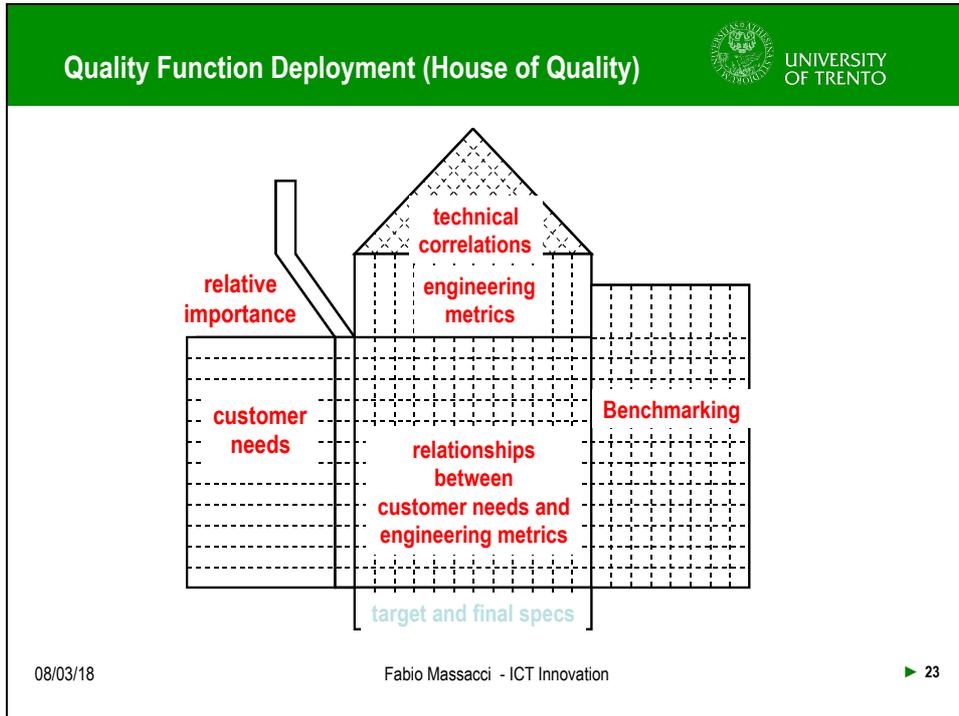

Product Specifications Example:
Mountain Bike Suspension Fork

08/03/18 Fabio Massacci - ICT Innovation ▶ 22

UNIVERSITY OF TRENTO

Detailed description: This slide features a green header with the text "Product Specifications Example: Mountain Bike Suspension Fork" and the University of Trento logo. The main image displays a variety of mountain bike suspension forks from different brands, including Bomber, Manitou, and Rock Shox. The forks are arranged in a row, showing different colors like red, orange, blue, and silver. At the bottom of the slide, there is a date "08/03/18", the name "Fabio Massacci - ICT Innovation", and a navigation arrow pointing to slide 22.

UNIVERSITY OF TRENTO

Two user classes

- **Key (or Lead or Power) users**
 - People who actually own a mountain bike and actually use it (or at least used it) on a cross country track
- **Normal users**
 - People who have used a bike or even a mountain bike (but use the latter only on Piazza Duomo for chasing pigeons)
- **The requirements might be different albeit you may want to sell to both**
 - Beware it might not be possible if the market might be heavily segmented

UNIVERSITY OF TRENTO

What is the monster g?

- **The Monster g was a shock test used by Mountain Bike magazine.**
 - The maximum value of the acceleration at the handlebar of a bike when the front wheel is subjected to a significant impulse.
 - Obviously the higher the acceleration the worse the amortization
- **Now you can't find it anymore on the web**
 - Mountain Bike magazine does more "life experience" reviews
 - But at the time useful as a measure well known to power users and wannabees

Quality Function Deployment (House of Quality)

The diagram illustrates the House of Quality structure. It features a central grid representing the relationships between customer needs and engineering metrics. Above the grid is a triangular roof labeled 'technical correlations' and 'engineering metrics'. To the left, a vertical column is labeled 'customer needs' and 'relative importance'. To the right, a vertical column is labeled 'Benchmarking'. Below the grid, a horizontal bar is labeled 'target and final specs'.

- ### Trade-offs also on reliability
- 

UNIVERSITY OF TRENTO
- **Gross Margin i.e. product sector**
 - 50% (eg software)
 - Can afford to recall 1 product out 2 and break even
 - 15% (eg consumer electronics)
 - Can afford only 1 product out of 10 to be faulty
 - **Time for fix/production**
 - 1month
 - Can ship a new upgrade to a customer
 - 1year
 - Cannot afford a recall of the product
 - **Legal liabilities, competitive market etc.**
